

CLAIMS

1. A forehead clearing apparatus comprising :

a pair of wedge shaped modules wherein each of said pair being further comprised of a hook and pile strip;

said hook and pile strip having a means for permanently bonding to a headband of a hat or cap;

said hook strip being permanently bonded to said wedge shaped module;

said pile strips being substantially longer than said hook strips so that said wedge shaped modules are positionable at different places along said pile strips so as to vary the distance between each of said pair of wedge shaped modules in order to create a forehead clearing area across a user's forehead.

2. A forehead clearing apparatus as in claim 1 wherein :

said wedge shaped module having a soft corner which can be a bevel or a rounded corner which provide for a softer contact on said forehead.

3. A forehead clearing apparatus as in claim 1 wherein :

said wedge shaped module having a core and an outer shell.

4. A forehead clearing apparatus as in claim 3 wherein :

said core being semi rigid, and said outer shell being made of a soft material.

5. A forehead clearing apparatus as in claim 4 wherein :

said core being spongelike.

6. A forehead clearing apparatus as in claim 1 wherein :

said wedge shaped module being integrated into hats or caps at the manufacturing site of hats and caps wherein said pile strip are preferably sewn in.

7. A forehead clearing apparatus as in claim 1 wherein :

said wedge shaped module being integrated into hats or caps at the manufacturing site of hats and caps wherein said pile strip are preferably glued and sewn in.

8. A forehead clearing apparatus as in claim 1 wherein :

said wedge shaped module being integrated into hats or caps at the manufacturing site of hats and caps wherein said pile strip are preferably glued in.

9. A forehead clearing apparatus as in claim 1 wherein :

said wedge shaped modules follow the contour of a user's head at the back and gradually distance said headband from said head as said wedge shaped modules goes along sides of said head until reaching said forehead where said wedge shaped modules end.

10. A forehead clearing apparatus as in claim 1 wherein :
said clearing areaa for forehead being between 2 to 5 inches wide;
 $\frac{1}{2}$ an inch at its thickest part;
no more than 1 inch wide.
